

Fluke launches on-demand and live webcasts

May 20, 2009

Fluke Networks has launched a series of on-demand and live webcasts offering advice and resources on the following topics to help enterprises and telecom carriers optimize network performance:

• Network Engineering & Design: For engineers tasked with designing enterprise networks and the underlying infrastructure.

• Network Installation & Troubleshooting: Technical how-to and standards for technicians who install, troubleshoot and test the network.

• Network Monitoring & Management: For monitoring and managing enterprise and service provider networks.

• Application & Network Performance: Insights into the issues and best practices for managing, deploying and optimizing application performance in an enterprise environment.
