

Belden joins the HDcctv Alliance to meet their application requirements

June 28, 2010

Belden â€“ a manufacturer of professional video cable â€“ joined the HDcctv Alliance to better their position in video surveillance camera connection technology. HDcctv Alliance is the global security industry that manages and promotes technical standards for HDcctv equipment interoperability.

Belden plans to provide direct transmission over media such as Category cable and optical fiber in future versions of the HDcctv standards, says the press release. Josh Dixon, Belden vertical market manager, safety and security states that: â€œthis new camera connection technology allows for higher performing systems, with a lower installation learning curve and a much lower cost of entry.â€•
